

Moti

by Qing Zeng

Moti is a multi-functional chair which is designed for prison cells in the UK. Because prisoners have to spend a long time inside their cells and facilities are very limited, Moti Chair aims to provide more functionality. Moti can be used as a study chair, rocking chair, low desk, storage and more. It is mainly made of corrugated cardboard because it is recyclable and low cost. The manufacturing process is simple so that prisoners can have a chance to get involved in the production.
