## Urban Camouflage

Mitemite Unnecessary Objects Lab - Urban Camouflage Laptop Case

Former Central Saint Martins MAID students have created a bag that hopes to deter thefts of laptop computers. When it's wrapped up in the pouch, the computer looks like the front page of Frankfurter Allgemeine, El Pais, La Vanguardia, Le Gazzetta dello Sport or other European newspapers.

This method of target concealment was created by a Spanish firm called the Mitemite Unnecessary Objects Lab in Barcelona. They call their bags "urban camouflage."

The colorful bags are made of a plastic fabric, designed for the MacBook Pro notebooks but will accommodate any number of brands - the size is about 15 inches by 11 inches - and costs about \$85 each.

## Zip It!

Zip It! - Crime prevention campaign - Client: BTP and DAC - 2006

Zip It! was created by Ismaril Wells, a former MAID student at Central Saint Martins.

Zip It! uses the technique of target hardening and is essentially a miniature karabiner now applied in a new context. Zip It! is inexpensive to produce, and were given away by the British Transport Police to promote better locking of back packs and handbags. Nothing is foolproof, but Zip It! will help slow down thieving fingers. The design was made from a single piece of stamped / die cut sheet material such as steel or plastic. You pop the 'lock' out of sheet and clip it on your bag during your journey. It can be used again and again, but due to general wear and tear, it won't last forever.

What makes Zip It! special is that it is combined with information and graphics to show the user how and why the product works.
